Here's what's on our minds:

15 Years of Dividend Growth

This year, marked the 15-year anniversary of Berkshire Dividend Growth SMA... "Big Picture" perspectives as we look back:

- It seemed every year, there was "Always a reason NOT to invest" yet staying out of the market usually proved costly, so keep clients 'in it'
- "Quality in down markets" -- We were always proud of the durability and quality of companies we own, as we saw it – especially in times of distress (and there were plenty)
- Regardless of the multitude of ways one could measure a manager's results or near-term performance cycles, we're proud of this chart and think most clients would gladly sign up for more of the same for the next 15.

	Composite		Composite		
	Gross		Net		
	Return (%)		Return (%)		S&P500
Period as of 12.31.2024					Return (%)
1 Year	12.074		9.074		24.998
3 Years	5.057		2.057		8.909
5 Years	8.3		5.3		14.504
7 Years	8.686		5.686		13.816
10 Years	9.466		6.466		13.086
Since Inception	12.699		9.668		14.885

[Please reference GIPS Composite for Returns Net of 3% Fees.](#) 3% fee represents the max fee in “wrap” programs in which Berkshire Dividend Strategy participates. Intended for illustrative purposes only. Income chart is based on the assumption \$1,000,000 is invested in the Berkshire Dividend Growth and Income Strategy at the inception of the Berkshire Dividend Growth and Income composite. (6/30/2009) The \$1,000,000 investment is adjusted monthly based on the stated monthly total returns for the given composite. This includes accumulation and reinvestment of the dividend. The monthly adjusted account values are then multiplied by the current yield of the respective composite. The resulting monthly income figures are then charted in the graph. Dividends are not guaranteed, and may be subject to change. Investing based on dividends alone may not be favorable as it does not include all material risks. There is no guarantee any stated (or implied) portfolio or performance objective mentioned by Berkshire can be met. A fee of 1% annually is included in analysis. Berkshire Dividend Growth and Income current yields are calculated in Zacks from a representative account only. Individual account yields and returns can vary. Calculation limitations: Changes of the underlying holdings in the index or composite can change current yield calculations. This can lead to various ranges of results that may appear more or less favorable. Example: Stock A with 3% current dividend yield is sold. Stock B with 4% current dividend yield is purchased. This would result in higher yielding portfolio but is not the result of “dividend growth”.

Current Environment

2024: Growth – Again!

- Concentration, and valuation at all-time highs
- Why pay up when profits seem to be accelerating?
- Is it a generational opportunity to rebalance? (charts from last week)
(Source: Bloomberg)

2024: Macro Didn't Work – Again!

- Fed: Seemingly dovish one day, hawkish the next
- A recession that never came sparked a rebound in key sectors
- Staying out of the market based on near-term worries again proved costly.
- 2025 might look complicated too. Dividend stocks: simplicity in a complex world?
(Source: Bloomberg)

Overall Market Valuation Thoughts:

- Not cheap but reasonable
- “S&P 490” about 19x Forward P/E
- Berkshire portfolio: 16.5x Forward P/E, with attractive relative yield and growth prospects, in our opinion
- U.S. preeminence may justify domestic allocations
(Source: Bloomberg)

Dividend Growth Observations

- Berkshire 5.5% YOY vs. 3% R1000 value
- Recession threat, an inverted yield curve and inflation didn't exactly inspire higher CEOs and CFOs to boost payouts
- Profits set to reaccelerate in 2025?
- Regulatory clarity should help bank and financial-oriented payouts

(Source: Bloomberg)

With growth & AI grabbing all the attention, dismissing the respectable returns of equity income is easy. Disciplined rebalancing means shifting from strategies that "are working" to ones that might be lagging which may frustrate retail investors. "Why do we have XYZ manager at all?" But here is a real opportunity for advisor alpha. Remind clients that different strategies have different jobs to do and will likely have different return and RISK profiles. Diversification didn't suddenly become obsolete. So stress the benefits of well-thought-out rebalancing – even when it's hard. The growth of YOUR AUM is counting on it!

2025: What DOES Being an Elite Advisor Mean Anyway?

<https://www.berkshireasset.com/wp-content/uploads/2024/04/Rethinking-Todays-Elite-Advisor.pdf>

2024: A record-breaking year for The Ocean Cleanup

Amazing -- "This year, The Ocean Cleanup removed [11.5 million kilos of plastic](#) from oceans and rivers. This total surpasses the amount collected in all previous years combined."

Definitions: The S & P 500 Index is a market capitalization weighted index of the largest 500 U.S. stocks. It is a market-value weighted index (stock price times # of shares outstanding), with each stock's weight in the index proportionate to its market value. The index is designed to measure changes in the economy and is representative of most major industries. Russell 1000 Growth Index measures the performance of those Russell 1000 companies with higher price-to-book ratios and higher forecasted growth values. The index was developed with a base value of 200 as of August 31, 1992. Russell 1000 Value Index measures the performance of those Russell 1000 companies with lower price-to-book ratios and lower forecasted growth values. The index was developed with a base value of 200 as of August 31, 1992. You cannot invest directly in an index. BEst (Bloomberg Estimates) Earnings Per Share (EPS Adjusted) estimate returns Earnings Per Share from Continuing Operations, which may exclude the effects of one-time and extraordinary gains/losses. Beta is a measure of volatility vs. an index. Upside/Downside capture ratios refer to a portfolio's performance as a percentage of either positive returns (upside) or negative returns (downside) vs. an index. Standard Deviation is a measure of total risk. Alpha, Beta and capture ratios are represented as calculated by Morningstar.

Risks: Past performance does not guarantee future results. Different types of investments involve varying degrees of risk, and there can be no assurance that any specific investment will either be suitable or profitable for an individual's investment portfolio. Dividends are subject to change, are not guaranteed, and may be cut. Investing based on dividends alone may not be favorable as it does not include all material risks. There is no guarantee any stated (or implied) portfolio or performance objective mentioned by Berkshire can be met. Berkshire's equity style may focus its investments in certain sectors or industries, thereby increasing potential volatility relative to other strategies or indices. The dividend strategy may include bundled services also known as a "wrap fee program". Because there is typically a low turnover in the strategy, this may be more costly for some investors. No one should assume that any information presented serves as the receipt of, or a substitute for, personalized individual advice from a qualified advisor or any other investment professional.

*Market Commentary, Aggregate Holdings, Securities, Sectors, Portfolio Characteristics Mentioned: No statement made in this presentation shall constitute investment advice. This presentation is for informational purposes only. Views, comments or research mentioned is not intended to be a forecast of future events. The mention of any security or sector is not deemed as a recommendation to buy or sell. Any reference to any security or sector is used to explain the portfolio manager's rationale for portfolio decisions or philosophy. Research or financial statistics cited regarding securities or sectors do not contain all material information about them. Any securities mentioned represent a partial list of holdings whereas Berkshire portfolios typically contain approximately 30-40 securities in percentage weightings ranging from 1-5%. A complete list of holdings from a representative account is available upon request. Overall portfolio characteristics mentioned are from a representative account deemed representative of the strategy; data may be compiled from Bloomberg, Baseline or Berkshire estimates. Individual holdings, performance and aggregate characteristics of actual portfolios may vary based on a variety of factors including market conditions, timing of client cash flows and manager discretion. This presentation contains Berkshire opinions and use of Berkshire estimates which are subject to change at any time. Berkshire employees may have personal positions in any securities or sectors mentioned.
